

Content calendar, 28 September to 11 October

Fourteen posts across Instagram, LinkedIn and X, ending the night the early-bird price closes. Rewritten on 29 September against the brochure and the live code, both of which moved after the first draft. Week one covers what LearnHub is, who the bootcamp is for, and gives away two lessons free. Week two walks the three arcs, names the six career paths, and closes on Saturday 10 October when the price goes from ₦150,000 to ₦350,000. Each post is written once for LinkedIn and cut for the other two. The company page speaks throughout.

14 posts, one per day	6 + 8 Instagram carousels + flyers
14 LinkedIn posts from the company page	5 + 9 X threads + single posts

SOURCE OF TRUTH · 29 SEP 2026

The numbers every post below uses

Taken from `lib/bootcamp/pricing.ts`, the brochure, and `content/bootcamp/CURRICULUM.md`. If any of these change, they change here first and the posts follow.

FACT	VALUE	WHERE IT COMES FROM
Early-bird price	₦150,000, until end of Saturday 10 October WAT	<code>pricing.ts</code>
Full price	₦350,000, from Sunday 11 October	<code>pricing.ts</code>
Payment plan	₦200,000 then ₦150,000, second payment before week three. Full price only	brochure

FACT	VALUE	WHERE IT COMES FROM
Cohort one starts	Monday 12 October 2026	brochure, curriculum
Live session	Saturdays, 11am WAT, recorded	brochure
Seats	35	brochure. Conflicts with the database, which seeds 25. See the open questions
What you need	A laptop, a Claude Pro plan at \$20 a month, and time to build weekly. No coding	brochure, curriculum
Certificate	Yes, only with all six projects, all assignments, all six tests and the final project. Public verification link	curriculum
You leave with	Seven projects, one a week plus the final, and a live product with an agent running it	brochure

RESEARCH · 22 AND 29 SEP 2026

Competitor accounts and ours

Five competitors plus our own three accounts, read on Instagram and their own sites. Follower counts are from the day they were read. Ours are in the set because they are the real starting line.

ALX Africa

123K · 1,761 posts

The reference point, and already in our lane. The highlight reel includes ALX-ANTHROPIC and AiCE, so the AI programme is not an opening we found first. The current push is user-generated: learners filming their own 90 seconds.

"Your Story. Your 90 seconds. Tell it." · #IAMTHESTORY_ALX

They can run a campaign on student voices because they have thousands of students. We have none yet, and pretending otherwise would be the fastest way to get caught.

AltSchool Africa

48.6K · 1,405 posts

Leads the bio with accreditation, not outcome. Reels-heavy grid, highlights built around applying: HOW TO APPLY, CERTIFIED, sTaRt 2026, School of Data. The link goes straight into a programme application.

"Africa's leading online school. Fully accredited by UK's ASIC."

Accreditation is their trust argument. Ours is the seven things a student can link to, plus a certificate anyone can verify.

Decagon

10K · 584 posts

Writes to employers, not to learners. The bio sells the graduates to companies rather than selling the programme to students.

"the top 0.5% of quality and reliable engineering talent"

Twelve months, coding track, and a different business model. Worth knowing because it is the far end of the market we are entering.

Darey.io

1,172 · 203 posts

The closest competitor. An AI and Agentic AI path running 8 to 12 weeks, live cohorts, labs, and a SignalScore that turns submitted work into a readiness score. NITDA and Cabo Verde Digital on the homepage, 4.3 on Trustpilot from 145 reviews, and xterns.ai for work experience afterwards.

"Learn. Build Proof. Get Hired In One Ecosystem."

Their cohorts page redirects to a login, so the price is hidden. They also still run a cloud engineering path, the one we closed.

SureSkill Cohort

20 · 301 posts

Short paid cohorts, AI tools, no code. Three hundred and one posts.

"Learn Tech. Build Skills. Change Your Life."

Twenty followers after 301 posts. Posting volume is not the thing. That is the most useful number in this table.

Us, today

6 · 2 · 10

Instagram 6 followers and 4 posts, X 2 followers and 9 posts, LinkedIn 10 followers and nothing since January. All three bios still sell cloud engineering, which we no longer teach.

"Start with Cloud Engineering" · "Training Africa's next generation of Cloud Engineers"

Nothing here needs protecting. We can change every word on Monday and no audience will notice the break.

So, for us

The decision on 29 September was to follow the brochure and sell employability, which means competing head-on with every school in this table rather than around them. That is a harder fight and the copy has to be picked accordingly, because two of the arguments available to us are ones we lose.

We lose on proof. Darey has 145 Trustpilot reviews, a readiness score and a government logo. AltSchool has UK accreditation. We have no graduates. So no post below claims outcomes, quotes a student, or implies anyone has finished anything. The certificate is described by what it takes to earn, not by what it is worth.

We lose on scale. ALX has 123,000 followers and runs free. We are not going to out-post or undercut that.

What is left is real and worth saying plainly. Six weeks against their eight to fifty-two. Thirty-five seats against their two hundred. A live session every Saturday with the person who built the school. Seven things on the internet you can send to anyone. One paid tool, named, at \$20. And a price printed on the page, which not one competitor in this table does. Darey redirects you to a login to find theirs.

SureSkill is the warning: 301 posts, 20 followers. That is what happens when a page posts about itself every day. So two of the fourteen days teach something with no ask attached, and they are the ones most likely to travel.

Nobody in this set writes text-led carousels that read like a short argument. They make posters, reels and application prompts. One sentence a frame, in the site's own type, is an open lane, and it costs nothing but writing.

PILLARS

Five content pillars

Every day below belongs to exactly one. If a post needs two, it is two posts.

01

● What the school is

An edtech company whose flagship is the AI Bootcamp. Who cohort one is for, and who it is not for.

Line: company first, cohort second. Never "I".

02

● Inside the six weeks

One arc or week per post. What you do, which tools, and the project that is live by Sunday.

Line: name the shipped project, not the topic.

03

● Teach it free

Real lessons from the curriculum, given away whole. Prompting, and the tells that give AI writing away.

Line: useful on its own. One line of ask at the end.

04

● The honest answers

The laptop, the Claude Pro subscription, the time it takes, and what the certificate actually requires.

Line: answer plainly, including the costs people would rather not hear.

05

● Enrol

The price, the 10 October deadline, the career paths, and where to pay.

Line: never imply a job is promised.

WORDS

The vocabulary

Decisions already made, collected so nobody re-argues them. The left column is what goes in a post.

SAY	INSTEAD OF	WHY
LearnHub	Learnhub, LearnAI	Camel case. It is how all three live pages and the site already spell it.
tech school , edtech company	ecosystem, launchpad, journey	Every school on the continent says those, including the closest competitor, whose headline is literally "in one ecosystem".
the AI Bootcamp , cohort one	the course, the programme, the training	It is what the brochure and the product call it.
the work to show for it	get hired, guaranteed job, land a role	The brochure's own line is "No bootcamp can promise you a job. This one makes sure you have the work to show for it." Careers are the subject; a job is never the promise.
a laptop, and a Claude Pro plan at	phone first, no laptop needed, all tools free	Both are required and both are in the brochure. Finding out on day one is how a cohort loses people in

SAY	INSTEAD OF	WHY
\$20 a month		week one.
seven projects, one a week plus the final	a portfolio, a capstone, hands-on experience	Says what exists at the end and can be counted.
₦150,000 until Saturday 10 October, then ₦350,000	affordable, invest in yourself, contact us for pricing	Publishing it is the differentiator. Not one competitor in the research does.
a certificate you earn by finishing everything	get certified, certification included	It requires all six projects, all assignments, all six tests and the final. Saying so makes it worth more, not less.
thirty-five seats	limited slots, filling fast, don't miss out	The cap is real. Scarcity language makes a true fact sound invented.

What LearnHub is now

The relaunch post. It has to say LearnHub is a school and that cohort one of the AI Bootcamp is open, in that order. Everything in it is checkable in the brochure today.

● WHAT THE SCHOOL IS

Gate: three bios changed

Owner: Pelumi

LINKEDIN

company page · 08:00

Most people using AI at work are using about five percent of it. One-off prompts, generic answers, and no idea what the tools can actually do.

LearnHub Global Academy is a tech school. Cohort one of the AI Bootcamp opens on 12 October, and it is six weeks of closing that gap.

Three arcs, one project every week.

Arc one, weeks 1 and 2. Your AI foundation. You set up a real builder stack, Claude Code, GitHub, Supabase and Vercel, and you learn to prompt with context, workflows and skills instead of one line at a time.

Arc two, weeks 3 and 4. Build and create. A live website or web app, then the AI video that launches it.

Arc three, weeks 5 and 6. Automate and earn. An AI agent running on your site, automations doing real work, and a career or business plan built on what you made.

You leave with seven projects, one a week plus the final, and a certificate you only get if you finished all of it.

What you need: a laptop, a Claude Pro plan at \$20 a month, and time to build every week. No coding experience.

Live sessions are Saturdays at 11am WAT, recorded. Thirty-five seats.

~~₦~~150,000 until Saturday 10 October, then ~~₦~~350,000. The price is on the page because most schools in this market make you fill in a form to find out.

Three kinds of people use AI

Aimed at the person who has already quit an AI course. The job is to move the blame off them and onto the course they picked.

● WHAT THE SCHOOL IS

Owner: Pelumi

LINKEDIN

company page · 08:00

Most AI courses fail people in one specific way. They teach group one material to group three people.

Group one builds AI. Engineers, researchers, people training models. Universities and DeepLearning.AI serve them well.

Group two uses AI casually. An email, a homework question, something to settle an argument. YouTube serves them for free.

Group three wants to build with it and be paid for that. Students and graduates who want skills employers are hiring for. Career changers who would rather not spend a year learning to code first. Marketers, founders and freelancers who want AI doing real work.

Group three does not need the maths. They need a live product by week three.

That is who the LearnHub AI Bootcamp is for, and it is why the first lesson is a setup and a prompt rather than a lecture. Cohort one starts 12 October. learnhub.dev/enrol

Image: slide 4 from the carousel, recropped square.

INSTAGRAM

carousel · 7 frames · 18:00

1. Three kinds of people use AI. This bootcamp is for one of them.
2. Group one builds AI. Engineers, researchers, people who train models. Universities serve them.
3. Group two uses AI casually. An email, a homework question, a quick answer. YouTube serves them, free.
4. Group three wants to build with it and get paid. Students, career changers, marketers, founders, freelancers. Almost nobody serves them properly.
5. Group three does not need to understand a transformer. They need a live product, a video that sells it, and an agent running it.
6. That is the whole bootcamp. Six weeks. Seven projects.
7. LearnHub AI Bootcamp. Starts 12 October. Link in bio.

Caption: "If you have ever opened an AI course and closed it again because lesson one was linear algebra, you were sitting in the wrong group's classroom. Nothing was wrong with you. The course was built for engineers, and you are not trying to become one." Then the LinkedIn last paragraph. **Design:** frames 2, 3 and 4 share one layout so the three groups read at a glance.

X

single · 09:00

1. Most AI courses are built for engineers. Most people taking them are not engineers.

That gap is the whole reason the LearnHub AI Bootcamp exists. Six weeks, seven projects, no model training in sight.

Wed 30 Sep

D3

What you need before day one

The requirements, said before anyone asks, including the two that cost money. Every competitor buries these. Putting them in week one is the cheapest trust we can buy.

● THE HONEST ANSWERS

Owner: Pelumi

LINKEDIN

company page · 08:00

What you need for the LearnHub AI Bootcamp, stated up front so nobody finds out on day one.

A laptop. The lessons read well on a phone, so you can study on the move, but Claude Code, Supabase, Vercel and n8n all need a laptop and the building happens there.

A Claude Pro plan, \$20 a month. That is the one paid tool. Everything else is taught on a free tier first, and where a free tier runs out, the lesson says so and names the cheapest way through.

Time to build every week. There is a project due every Sunday and no week that is only theory.

What you do not need: any coding experience, any previous build, or any AI experience past the basics.

Week 0 runs before the cohort starts and exists so nobody loses day one to a laptop check and five sign-up screens.

Cohort one starts 12 October. learnhub.dev/enrol

A good prompt has five parts

Week two of the curriculum, given away whole. No ask until the last frame. One of the two posts most likely to be saved and sent on, so it gets the most design attention in week one.

● TEACH IT FREE

Owner: Pelumi

LINKEDIN

company page · 08:00

"Act as a world class marketer" is not a prompt. It is a wish.

People treat prompting as a list of magic words. It is closer to briefing a contractor. What comes back tracks the quality of what went in, and what goes in has five parts.

Context. What the situation is, who the output is for, what already exists. The model cannot see your business.

Role. Not "expert", which means nothing. Something specific: an editor who hates adverbs, a customer who is about to leave.

Constraints. Length, format, what to leave out. This is where most of the quality comes from, and it is the part people skip.

An example. One sample of what good looks like beats two paragraphs describing it.

Iteration. The first answer is a draft. Push back the way you would with a junior colleague. And when a conversation has too many wrong turns in it, start a new one with a better brief instead of correcting it for the tenth time.

That is the whole skill. There are no secret phrases, and anyone selling you a list of them is selling you a list.

Week two of the bootcamp goes past this into workflows and skills, which is where one-off prompting stops working. Cohort one starts 12 October. learnhub.dev/enrol

Image: the carousel as a PDF document, which LinkedIn makes swipeable. Post it as a document, not an image.

INSTAGRAM

carousel · 8 frames · 18:00

1. A good prompt has five parts. Most people use one.
2. Context. What is going on, who it is for, what already exists. The model cannot see your screen.
3. Role. Who you want it to be. "You are an editor who cuts adverbs" beats "make this better".
4. Constraints. Length, format, what to leave out. Constraints are where the quality comes from.

5. An example. One sample of the output you want is worth two paragraphs describing it.
6. Iteration. The first answer is a draft. Push back on it the way you would with a junior.
7. What it does not have: magic words. "Act as an expert" does nothing. Context does everything.
8. Week two of the LearnHub AI Bootcamp goes past this into workflows and skills. Link in bio.

Caption: open with "Save this one." Then the LinkedIn post from paragraph two. Add the line that did not fit on a slide: knowing when to abandon a conversation and start fresh. **Design:** frames 2 to 6 numbered 1 to 5 in the mono face, large, top left.

x

thread · 7 posts · 09:00

1. Most people write one line and call it a prompt. A good one has five parts. No magic words involved.
2. Context. What is going on, who it is for, what already exists. The model cannot see your screen, your business, or your last three attempts.
3. Role. "Expert" means nothing. "An editor who cuts every adverb" means something. Be specific about who you want in the room.
4. Constraints. Length, format, what to leave out. Skipped by almost everyone, and it is where the quality comes from.
5. An example. One sample of the output you want is worth two paragraphs describing it. Paste one in.
6. Iteration. The first answer is a draft. Push back. And when a chat is full of wrong turns, start a new one with a better brief.
7. Week two of the LearnHub AI Bootcamp goes past this into workflows and skills, which is where one-off prompting stops working. learnhub.dev/enrol

Seven projects, not seven certificates

The curriculum as things that exist rather than topics covered. This is the post to send to anyone who asks what the bootcamp covers, so it becomes the pinned carousel in the highlights.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 08:00

Most courses end with a folder of notes you never open again. Here is what exists at the end of this one.

An AI workspace that knows you, your first skill, and a one-page site live on the internet.

Your own prompt library and voice skill, and published writing that sounds like you.

A live website or web app that works on every device.

A UGC-style ad and a motion graphic that launch it.

An AI chatbot on your site, and an automation doing real work for it.

A live offer with outreach sent, or three tailored job applications.

Then the final project, which combines all three arcs into one real thing, presented at demo day.

Seven projects. Every one of them is a link you can send to someone.

Cohort one starts 12 October. learnhub.dev/enrol

Image: the carousel as a LinkedIn document.

INSTAGRAM

carousel · 9 frames · 18:00

1. Seven things you will have built by demo day.
2. Week 1. An AI workspace that knows you, your first skill, and a one-page site live on the internet.
3. Week 2. Your own prompt library and voice skill, and published writing that sounds like you.
4. Week 3. A live website or web app that works on every device.
5. Week 4. A UGC-style ad and a motion graphic that launch it.
6. Week 5. An AI chatbot on your site, and an automation doing real work for it.
7. Week 6. A live offer with outreach sent, or three tailored job applications.
8. Final project. All three arcs in one real thing, presented at demo day.
9. Seven links you can send to anyone. LearnHub AI Bootcamp, starts 12 October.

Caption: the LinkedIn post. **Design:** frames 2 to 8 share a layout with the week number in mono. This becomes the AI Bootcamp highlight cover.

1. Seven projects in six weeks, each one a link you can send to someone:

Wk 1 an AI workspace and a live one-page site

Wk 2 a prompt library and published writing

Wk 3 a live web app

Wk 4 a UGC ad and a motion graphic

Wk 5 a chatbot and an automation

Wk 6 a live offer or three applications

+ the final project

Questions before you enrol

A Saturday carousel that clears the objections early rather than at the deadline, so week two can spend its days on the curriculum. No LinkedIn slot: the page is quiet at weekends and this is worth more on Instagram.

● THE HONEST ANSWERS

Owner: Pelumi

INSTAGRAM

carousel · 10 frames · 10:00

1. Questions people ask before they enrol.
2. Do I need to know how to code? No. You build websites and apps by directing AI, and every step is taught from zero.
3. Do I need a laptop? Yes. Lessons read well on a phone, but the building happens on a laptop.
4. What does it cost to run? One paid tool, Claude Pro at \$20 a month. Everything else starts on a free tier.
5. What if I miss a Saturday session? They are recorded, so you catch up the same week.
6. What if I fall behind? Your pod and the live session are there for exactly that. Tests can be retaken as many times as you need.
7. How do I get certified? All six weekly projects approved, every assignment handed in, all six tests passed, and the final project presented.
8. Is the certificate worth anything? It has a public verification link, so anyone can check it is real. And there are seven projects behind it.
9. Can I pay in two parts? Yes, at full price: ₦200,000 then ₦150,000 before week three.
10. Anything else, send a message. Link in bio.

Caption: "The questions that arrive in the DMs, answered in one place. If yours is not here, send it." Then the price line and the date.

X

single · 10:00

1. Before you enrol in the LearnHub AI Bootcamp:

Coding? Not needed.

Laptop? Yes.

Paid tools? One, Claude Pro at \$20/mo.

Miss a Saturday? Recorded.

Certificate? Only if you finish everything.

Pay in parts? Yes, at full price.

Anything else, reply here.

Nothing on Saturday. The company page has ten followers and a quiet weekend post spends reach that Monday needs.

Sun 4 Oct

Thirty-five seats and a Saturday call

The argument for the format, and for the cap. It borrows what the large programmes proved and names the failure mode they have, without naming them.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 10:00

Cohort courses get finished and self-paced ones mostly do not, and it has very little to do with the content.

A self-paced course has no date on it, so there is always tomorrow. A cohort has a start, an end, and a group of people who notice when you disappear. That pressure is what makes people finish. The videos matter far less than anyone expects.

The large cohort programmes proved this, and they also showed the failure mode. Put two hundred people in a cohort and most of them are gone by month six. Peer mentorship becomes a lottery, where the quality of your experience depends entirely on which group you were dropped into, and two or three people end up carrying everyone.

So this one is deliberately small.

Thirty-five seats, so everyone is known by name by week two.

A live session every Saturday at 11am WAT, where builds are reviewed and questions answered. Recorded if you cannot make it.

A pod: a small group from your cohort to build alongside, so nobody gets stuck alone.

A project due every week, reviewed and either approved or sent back.

The cohort and the pod stay together after demo day.

Six weeks is short enough that people actually finish.

Cohort one starts 12 October. learnhub.dev/enrol

Image: the carousel as a document.

INSTAGRAM

carousel · 8 frames · 18:00

1. Why cohort courses get finished and self-paced ones do not.
2. A self-paced course has no deadline. So there is always tomorrow. Tomorrow is where courses go to die.
3. A cohort has a start date, an end date, and 34 other people who notice when you go quiet.
4. A live session every Saturday, 11am. Builds reviewed, questions answered. Recorded if you miss it.

5. A pod. A small group from your cohort to build alongside, so nobody gets stuck alone.
6. A project due every week, reviewed and either approved or sent back to you.
7. Your cohort and your pod stay together after demo day.
8. Thirty-five seats. LearnHub AI Bootcamp, starts 12 October. Link in bio.

Caption: "The most useful thing about a cohort is not the content. It is the other 34 people." Then LinkedIn paragraphs two and four. **Note:** no completion percentage anywhere. The research supports the direction, not a number.

x

single · 19:00

1. A live call with 200 people is a broadcast. People quietly stop turning up to those.

Cohort one of the LearnHub AI Bootcamp is 35 seats, with a live session every Saturday. Small enough that everyone is known by name by week two.

Mon 5 Oct

D8

Seven signs a machine wrote it

The post most likely to be sent to somebody else, because everybody has received writing like this. It also proves the editing standard rather than claiming it.

● TEACH IT FREE

Owner: Pelumi

LINKEDIN

company page · 08:00

Writing with AI is easy. Writing with AI so that it still sounds like you is the actual skill, and almost nobody teaches it.

You can tell in a sentence when a post came straight out of a model. The em dash in every line. The "it is not just X, it is Y" construction. Everything grouped in threes. Delve, landscape, leverage. A paragraph that ends with "this highlights the importance of" instead of just ending. Balanced on every question, with no opinion anywhere. Every sentence the same length, so the whole thing drones.

None of that is the model's fault. It is what happens when people stop at the first draft and call it finished.

Week two of the LearnHub AI Bootcamp teaches the model your voice as a reusable skill, so the draft starts closer to how you actually write. Then it spends the rest of the week on the edit: cutting the tells, putting the opinions back, reading it aloud until it sounds like the person whose name is on it.

The project is your own prompt library and voice skill, plus published writing in your voice. Published, because the edit only gets serious when someone is going to read it.

Cohort one starts 12 October. learnhub.dev/enrol

Image: carousel as a document. **Watch:** this post must not contain one of the tells it lists. Read it aloud before scheduling.

INSTAGRAM

carousel · 9 frames · 18:00

1. Seven signs a machine wrote it.
2. Em dashes everywhere. Humans use one a page. Models use one a sentence.
3. "It is not just X, it is Y." Once is fine. Four times in a post is a tell.
4. Everything comes in threes. Fast, simple, and reliable. Bold, honest, and clear. Real people are messier.
5. The words. Delve. Landscape. Leverage. Tapestry. Nobody says tapestry.
6. Every paragraph ends with a lesson. "This highlights the importance of." A person just moves on.
7. No opinions. Both sides, balanced, safe. A person with a view says so.
8. Every sentence is the same length. Read it aloud. If it drones, a machine wrote it.

9. Week two of the LearnHub AI Bootcamp teaches the model your voice, then spends the rest of the week on the edit. Link in bio.

Caption: "Most AI writing fails for one reason. It reads like AI wrote it." Then LinkedIn paragraphs three and four, and "Screenshot the slides and check your last post against them."

Arc one: your AI foundation

Weeks 1 and 2 in one post. The surprise here is week one, which is a builder setup rather than a prompting lecture. That is the thing most people will not expect from an AI course.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 08:00

Week one of the AI Bootcamp is not a lecture about prompting. It is a setup.

By Sunday of week one you have a Claude Project that knows who you are and what you are building, your first custom skill, and a one-page site live on the internet. To get there you install and use the stack a real builder uses: Claude Code, GitHub, Supabase and Vercel.

Most people using AI have never left the chat box. That is why their results are generic. Week one moves you out of it.

Week two is the prompting, and it goes further than the usual advice. Context, roles and constraints, then teaching the model your voice so writing sounds like you, then prompts for the work you actually do: posts, emails, proposals, captions, offers, landing pages and launch copy.

The project is your own prompt library and voice skill, and published writing in your voice.

That is arc one. Two weeks, and you are no longer an average user of these tools.

Cohort one starts 12 October. learnhub.dev/enrol

Week three: a live product

The week most people enrol for, and the single most persuasive thing the bootcamp does. Moved from week five in the earlier plan, which is why this post now sits in the middle of week two rather than at the end.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 08:00

By the end of week three you have a website or a web app on a live URL, with a database and sign-in, that works on a phone.

You will not have written a line of code by hand.

What week three actually teaches is the part that decides whether these tools work for you: getting AI to plan before it writes anything. Everyone who has tried and given up did the same thing, which is to describe a whole product in one message and accept whatever came back. The plan is the skill.

Then the rest. How a web app works, so you can tell when the answer is wrong. Adding a database and sign-in. Putting it live. Making it work on every device, and monitoring it with basic security practice, which almost nobody teaches at this level and which is what separates a demo from a product.

Tools: Claude Code, Supabase, Vercel, v0 and Lovable.

The test is the same one a customer applies. Can a stranger open it on a phone and use it.

Cohort one starts 12 October. learnhub.dev/enrol

Week four: video that sells it

Week four launches the week three product, which is the thing that makes the arc structure worth explaining. Lead on the objection that stops most people, which is being on camera.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 08:00

Week four exists to launch what you built in week three. That pairing is the whole point of the arc.

You do not have to be on camera for any of it.

The week covers realistic AI video and which tool is best for what, UGC-style ads, AI voice, avatars and motion graphics, and editing video using agents rather than by hand.

Tools: Veo, Kling, Higgsfield, ElevenLabs, Remotion and CapCut.

The project is a UGC-style ad and a motion graphic that launch your week three product.

This is also the most directly sellable skill in the six weeks. Businesses that will never hire a developer will pay for an ad, and the people making those ads at the moment are mostly not using these tools yet.

Cohort one starts 12 October. learnhub.dev/enrol

Arc three: agents, then a career

Weeks 5 and 6, and the last content post before the deadline. It names the six career paths, which is the clearest answer to "what do I do with this", and it carries the brochure's own honest line about jobs.

● INSIDE THE SIX WEEKS

Owner: Pelumi

LINKEDIN

company page · 08:00

The last two weeks of the AI Bootcamp are the ones that turn six weeks of building into something you can be paid for.

Week five is agents and automation. What an agent actually is and how it differs from a chatbot. Building agents without code and in the Claude console. A chatbot live on your site, and your own AI operating system. Automations that run on their own, using the tools companies actually use: Google Opal, n8n, Zapier and Make.

The project is an AI chatbot live on your site and an automation doing real work for it.

Week six is the career and business week. You choose a path and build the case for it:

AI Automation Specialist, building workflows that save a business hours every week.

AI UGC Ad Creator, making AI video ads for brands.

AI Copywriter, writing posts, pages and campaigns in a client's voice.

AI Web Product Builder, shipping websites and web apps for clients.

AI Product Marketer, launching products with AI copy, video and automation.

AI Agent Builder, setting up chatbots and agents for support and sales.

Then your CV and LinkedIn rebuilt around what you actually built, how to find and apply for work using AI, and how to package it as a business instead if that is the path you want: the offer, the pricing, and the first clients.

The project is a live offer with outreach sent, or three tailored job applications.

No bootcamp can promise you a job. This one makes sure you have the work to show for it.

Cohort one starts 12 October, and the early-bird price closes tomorrow night. learnhub.dev/enrol

Image: carousel as a document. **Note:** the last line is the first deadline mention in the calendar. Everything before this has been content.

₦150,000 until tonight

The deadline post, and the sharpest thing in the two weeks, because not one competitor in the research publishes a price at all. The urgency is real: the number changes at midnight and the code enforces it.

● ENROL

Gate: checkout live

Owner: Pelumi

LINKEDIN

company page · 10:00

Go and look at any AI school in this market and try to find the price. You will find a contact form.

Here is ours. ₦150,000 until tonight. ₦350,000 from tomorrow.

That covers all six weeks of lessons in video and written form, a live session every Saturday, review and feedback on every project, your pod and the cohort community, demo day, and a certificate with a public verification link.

Not included: your laptop, and a Claude Pro plan at \$20 a month. Every other tool is taught on a free tier first.

If ₦350,000 in one payment is the problem rather than the price, there is a plan: ₦200,000 now and ₦150,000 before week three.

Thirty-five seats. Cohort one starts Monday.

learnhub.dev/enrol

Image: flyer 13. **Gate:** this post is the one that needs Paystack checkout actually live. See the open questions.

INSTAGRAM

flyer · 10:00, and again to story at 19:00

- *Flyer 13. Label: EARLY-BIRD CLOSES TONIGHT. Headline: "₦150,000" with "₦350,000" struck through beside it. Subline: "Until midnight. Then it doubles. Cohort one starts Monday."*

Caption: the LinkedIn post, whole. **Design:** the number is the entire flyer, royal blue on navy, at least twice the size of any other headline in the set. Spend the most time on this one. **Story at 19:00** with a countdown sticker set to midnight, the only scarcity device used in the whole two weeks, and it is a real one.

X

single · 10:00

1. The LearnHub AI Bootcamp is ₦150,000 until tonight, then ₦350,000.

That is on the page, not behind a contact form. Go and try to find any other AI school's price in this market.

35 seats. Starts Monday. learnhub.dev/enrol

Sun 11 Oct

D14

It starts tomorrow

The close. The early-bird has gone and the post says so plainly rather than pretending, which is the only honest way to use a deadline that has already passed. Everything the two weeks said, in one post, at the new price.

● ENROL

Owner: Pelumi

LINKEDIN

company page · 10:00

The early-bird closed last night. Cohort one of the LearnHub AI Bootcamp starts tomorrow, and there are still seats.

Everything about it, in one post.

Who it is for. Students and graduates who want skills employers are hiring for. Career changers who would rather not spend a year learning to code. Marketers, founders and freelancers who want AI doing real work. Anyone done with tutorials.

What it is. Six weeks, three arcs, a project every week.

Arc one, weeks 1 and 2. Your AI foundation: a real builder stack, and prompting that gets you what you asked for.

Arc two, weeks 3 and 4. Build and create: a live web app, then the video that launches it.

Arc three, weeks 5 and 6. Automate and earn: an agent and automations, then a career or business plan built on them.

Then the final project, presented at demo day.

How it runs. Thirty-five seats. A live session every Saturday at 11am WAT, recorded. A pod. Review on every project.

What you need. A laptop, a Claude Pro plan at \$20 a month, and time to build weekly. No coding.

What you leave with. Seven projects, each one a link you can send to someone, and a certificate with a public verification link that you only get by finishing all of it.

What it costs. ~~₦~~350,000, or ~~₦~~200,000 now and ~~₦~~150,000 before week three.

learnhub.dev/enrol

Image: flyer 14. **Then:** the two weeks are over. Monday moves to cohort-in-progress content, which is a different calendar.

- *Flyer 14. Label: COHORT ONE. Headline: "It starts tomorrow." Subline: "Six weeks. Seven projects. ₦350,000, or two payments. Seats left."*

Caption: the LinkedIn post, trimmed to the three arcs and the last four paragraphs. **Then:** set the day 5 carousel as the AI Bootcamp highlight cover.

1. Early-bird closed last night. Cohort one of the LearnHub AI Bootcamp starts tomorrow and there are seats left.

Six weeks. Seven projects. ₦350,000, or ₦200k now and ₦150k before week three.

The whole thing is in the pinned thread. learnhub.dev/enrol

VOICE

Voice rules

The company page speaks, to one reader at a time. Pelumi's own accounts carry the first person and the history. These two voices do not mix, and the rule was set on 22 August after the masterclass page was written twice in the wrong one.

Always

- Open on the reader's situation, never on the company name.
- One idea per post. One call to action, one destination, and the destination is learnhub.dev/enrol.
- Use the vocabulary above. Bootcamp, not programme. LearnHub, camel case.
- Name what the student will have built, not what they will have learned about.
- Say the price, and say the two costs that are not included.
- Keep sentences short. Nigerian English rhythm is correct here and is not something to edit out.
- Every figure in the mono face. It is the site's signature; keep it on social.
- Read it aloud before scheduling. If a sentence sounds like a school addressing an intake, replace it.
- Emoji in the three bios only, one per line. Never inside a post.

Never

- "I". The company page is not a person. The story belongs on Pelumi's own accounts and gets reposted from there.
- The 2025 closure, the cloud programme, the scholarships, or the student who paid ₦150,000. That is his marketing, not the company's.
- Promise a job, imply a placement, or name a salary. The brochure's line is the ceiling: no bootcamp can promise you a job.
- A testimonial, a student count, a completion rate or an outcome. Nobody has finished a cohort yet.
- "Phone first" or "no laptop needed". A laptop and Claude Pro are both required and both are said out loud.
- Scarcity language on top of a real cap or a real deadline. Thirty-five seats and midnight on the 10th are both true. "Filling fast" is not checkable.
- Em dashes. Sentence case in headings. One exclamation mark per thousand words at most.
- Stock photography of people in headsets pointing at screens.

MEASUREMENT

What we measure

Follower counts are not on this list. Two weeks from a standing start of six, two and ten followers gives a baseline and nothing more. These are the numbers that decide what cohort two's campaign looks like.

SIGNAL	WHERE	WHY IT MATTERS	READ IT ON
Paid enrolments, and how many came before the 10th	Supabase enrolments	The objective. The early-bird split tells you whether the deadline did any work or whether people would have paid anyway.	daily
Waitlist signups that did not convert to payment	waitlist vs enrolments	The gap between interest and ₦150,000 is the real size of the price objection.	Sun 11 Oct

SIGNAL	WHERE	WHY IT MATTERS	READ IT ON
Saves and shares per carousel	Instagram insights	The only carousel measure that means anything. Likes are noise.	Sun 11 Oct
Which two posts travelled furthest	All three	The bet is that D4 and D8, the two free lessons, beat everything else. If the week posts win instead, cohort two leads with curriculum.	Sun 11 Oct
Questions in DMs and comments, collated	Instagram, LinkedIn, X inboxes	D6 answers eight. Whatever arrives that is not on that list is what the brochure is missing.	daily
Link taps that do not convert	Vercel Analytics vs enrolments	A big gap means the enrol page is losing people the posts already won.	Fri 2, Sat 10
LinkedIn: views, and which named people comment	LinkedIn	Who is watching is more useful than how many, on a page with ten followers.	Sun 11 Oct

BEFORE MONDAY

Production and open questions

Production this week

1. **Replace all three bios.** Every one still sells cloud engineering. This gates D1: the launch post lands on pages that contradict it otherwise. New copy is in `learnhub-social-launch.md` and needs the new price and date.
2. **Point all three bio links** at `learnhub.dev/enrol`, replacing the two Linktrees.
3. **LinkedIn page fields.** Industry to E-Learning Providers, type from Partnership to Privately held unless it is registered as one, specialties, and the custom button to Sign up.
4. **Archive the four cloud posts** on Instagram rather than deleting them.
5. **One carousel template and one flyer template**, both off the live site: navy and white grounds, Switzer headlines, General Sans body, a mono label, royal blue on one element. Six carousels and eight flyers come from these two.
6. **Build week one first.** Flyers 01 and 03 plus carousels D2, D4, D5, D6 and D7 by Sunday. Week two by Wednesday 7.
7. **Flyer 13 is the important one.** The price flyer carries the deadline and it is the post the whole two weeks builds towards.

Questions for Pelumi

1. **Checkout has to be live before Saturday 10 October.** Right now `learnhub.dev/enrol` is still the waitlist form saying "no payment now", and the cohorts row is seeded `upcoming`, so the buy button is off. D13 is a deadline post pointing at a page that cannot take money. This is the one thing that breaks the campaign.
2. **Thirty-five seats or twenty-five?** The brochure says 35 twice. The database seeds `paid_seat_cap` at 25 and the pricing test asserts against 25. The calendar uses 35 because that is what is published. Whichever is right, the other needs changing before D7 goes out.
3. **The brochure's own CTA says "Join the waitlist"** while its price page says pay before the 10th. Those cannot both be true on 10 October.
4. **Who posts.** Fourteen days across three platforms is real work. You, or the social freelancer?
5. **Footage.** Anything usable left from the 22 August studio shoot? If not, every flyer is type-only and that is fine.
6. **learnhub.dev itself.** The homepage still sells the career-matching product, not the bootcamp. Every link here goes to `/enrol` so it does not matter this time, but anyone who trims the URL lands somewhere else.

SOURCES

Price, deadline and seat cap from `Learnhub-ai/lib/bootcamp/pricing.ts` and `supabase/migrations/20260821170000_bootcamp_seed.sql`, read 29 September 2026.

Curriculum, arcs, weekly projects and certification from `Learnhub-ai/content/bootcamp/CURRICULUM.md` and `learnhub-launch/brochure/brochure.html`, both read 29 September 2026.
